

## MORTALITY LEARNING BULLETIN

### **PULMONARY HAEMORRHAGE**

Think carefully before removing the ET tube. Simulation of strategies to manage this challenging situation may be helpful

### **ANTENATAL COUNSELLING**

Do you have defined pathways for how this is delivered to ensure consistency?

### **ANTENATAL PLANS**

Where are they documented? Will they be available to those who need them when a woman presents in labour?

### **DOPE**

When there is unexpected deterioration don't forget to think about air leaks. A cold light needs the room to be dark and so in a resuscitation may not detect a pneumothorax. If in doubt second intercostal space and needle the chest

### **SURGICAL UPLIFT**

Is there a value in a conference call with all key stakeholders prior to transfer? Is transfer in a baby's best interests?
