

MORTALITY LEARNING BULLETIN

DELIVERY ROOM CUDDLES

Can you facilitate a delivery room cuddle? Very sadly for some it could be the only time a family gets to hold their baby alive.

CRANIAL ULTRASOUNDS

If possible, a cranial USS before transfer in the preterm population is good practice.

RESUSCITATION PROFORMAS

Do you use a resuscitation proforma? We would recommend these are used and can be useful to photocopy this document if the baby is being transferred for the accepting team to be able to read exactly what happened in the resuscitation.

JOINT PMRT REVIEWS

Joint PMRT reviews when babies move across units and involving all specialties involved for example cardiology, surgical teams will yield the most in terms of learning from deaths.
